

A NEW MILESTONE

RESNET® is a recognized national standards-making body for building efficiency rating and certification systems since 1995. The RESNET rating industry is celebrating another milestone:

Over 4 MILLION HOMES in the United States have been HERS® rated!

WHY HERS HOMES?

Home Energy Rated System (HERS) homes are environmentally friendly homes that provide better home comfort, lower running costs and higher resale values. Building code officials, local utilities, and government agencies at all levels recognize the HERS index score as an official verification of energy performance. Builders are also using their HERS Index Scores for environmental, social and governance (ESG reporting). These efforts are driving demand and confirming RESNET and the HERS index as the industry gold standard.

The HERS Index Score plays an increasingly important role in the housing industry to measure the efficiency of their homes, as rated by certified RESNET home energy professionals.

Consumer awareness of building performance and indoor air quality has been increasing significantly in recent years. Furthermore, tax credits, investor environmental reporting, more stringent energy codes and market-driven incentives have encouraged home builders to improve the energy efficiency of the homes they build.

RESNET raters, inspectors, providers, suppliers, and homebuilders have all contributed in RESNET's success of reaching this milestone.

Thank you for your commitment to a future with more environmentally friendly homes.
